

## **Pinball Testing**

- The sound doesn't always properly align with hit of the bumper.
- Sometimes the pinball will get 'stuck' in a loop before eventually breaking out of it.
- Direction of pinball doesn't always align with where it hit the flipper.
- If pinball gains too much speed, it will seemingly freeze in place until the game eventually ends.
- The flipper doesn't reset when the game is restarted.
- The flipper can go out of bounds.
